1 ABSTRACT OF THE DISCLOSURE

2 The present invention is a combined encoder and
3 perceptual encrypter for a file of high quality video.
4 The combined encoder and perceptual encrypter includes
5 an encoder and perceptual encrypter. The encoder
6 encodes the file of high quality video as encoded
7 data. The perceptual encryption module perceptually
8 encrypts the encoded data in order to generate
9 restricted video data as perceptually encrypted
10 encoded data.
